

THE BEST CONTROLLER JUST GOT BETTER!

INTRODUCING THE
FET2 WITH

E-Wire
TECHNOLOGY

WHAT IS **E-Wire** TECHNOLOGY?

IT IS AN ELECTRONICALLY SIMULATED WIRE CHOKE

(this is not a voltage reduction choke as on other Third Eye products)

E-Wire FEATURES AND BENEFITS *(In addition to standard FET2)*

- Performs precisely as a conventional wire choke.
- Exclusive Third Eye proprietary design. The choke is fully electronic and built into the controller. No bulky coils and extra wires.
- Adjustable from 3-20ft and 20-40ft FT equivalent of wire choke.
- Infinitely adjustable pot for precise choke setting.
- Unique concept of choke selection -- The correct amount of choke can be "Dialed in" for each car/track conditions and can be changed on the fly.
- Available in the near future with Partial Choke Bypass.

WHAT PEOPLE ARE SAYING ABOUT **E-Wire**

"I've been racing eurosport with this new choke and it works EXACTLY like a wire choke, except I now have the convenience of dial adjustment ON THE GO. No more fumbling around with alligator clips." - George Russell, Team Third Eye, PK Armatures, Camen

"I love the new e-wire choke! The ability to adjust my choke settings during a race, without having to wait for a track call or the end of a heat, has been a huge advantage over other racers still using a conventional wire choke. With the e-wire, it feels just like a wire choke, but with the ability to adjust it on the fly." - Justin Colvin, Team Third Eye, ProSlot, Camen, Alpha

"You hit a home run with the new FET2 w/E-wire choke! It feels the same as a wire choke, but with the ability to adjust the dial for more or less choke on the fly. Beats the hell out of waiting until the end of the heat or a track call to make needed changes. Great job of listening to our needs, Howard!" - Fred "Crash" Hood, Team Third Eye, Camen, Pro Slot
